ÉDITO

Cet Atlas est le deuxième édité par l'ISPF pour présenter, géographiquement et visuellement, les principaux résultats du recensement de la population de 2012. Le premier, publié pour le recensement de 2007 proposait un ensemble de cartes au niveau infra-communal (quartier 2000). Ce niveau favorise la compréhension des enjeux se situant à l'échelle communale. Avec le recensement de 2012, l'implication croissante des communes dans le développement et la gestion de leurs territoires confirme le bien-fondé de ce mode de représentation.

Cette deuxième publication permet la comparaison avec les données de 2007, sur toutes les grandes thématiques couvertes par le recensement : Population, Migration, Éducation, Activité, Logement... Les mêmes cartes ont été reprises et enrichies d'indicateurs supplémentaires pour observer au plus près les nouvelles réalités démographiques et socio-économiques de la Polynésie française.

Les principaux enseignements du recensement de la population 2012 se retrouvent présentés ici sous la forme cartographique qui facilite une appropriation plus immédiate des résultats et des analyses proposés. Bien au-delà du simple catalogue d'indicateurs statistiques, cet atlas offre une vision géo-référencée de la situation de la population de Polynésie française.

Puisse cet atlas aider le lecteur à améliorer sa connaissance de la Polynésie française et constituer, pour les acteurs publics et sociaux, une contribution utile à leur réflexion ainsi qu'à la conception et à la mise en œuvre des politiques publiques de développement.

L'ensemble des cartes de cet atlas et d'autres cartes complémentaires sont disponibles sur le site internet de l'ISPF : www.ispf.pf.

Stéphane CHALLIER

Information générale au lecteur

Au sens du recensement, la population est répartie selon le découpage administratif en vigueur en Polynésie française : 48 communes et 98 communes associées dans 5 subdivisions : Îles Du Vent, Îles Sous-Le-Vent, Marquises, Australes, Tuamotu-Gambier.

Dans une commune, la population comprend :

- la population des résidences principales ;
- les personnes vivant en communauté dans la commune ;
- les personnes sans abri.

Pour réaliser la collecte, les communes et, les communes associées si nécessaire, sont divisées en « districts de recensement » comprenant en moyenne 100 logements. La diffusion des résultats se fait ensuite en regroupant l'ensemble des districts appartenant à une commune ou commune associée. Cet atlas propose une diffusion des données au niveau infra-communal en redécoupant les communes qui dépassent 4 000 habitants. Ce zonage appelé « Quartier 2000 » regroupe des districts contigus qui constituent un quartier comprenant entre 2 000 et 4 000 personnes et respecte les limites administratives des communes. Les communes et communes associées n'excédant pas 4 000 habitants ou ne pouvant être découpées en quartiers homogènes sont considérées comme des quartiers.

L'ensemble des indicateurs présentés dans cet atlas est issu des résultats du recensement de la population de 2012. Chaque indicateur est analysé au niveau infra communal, celui du quartier. À chaque indicateur, correspondent deux cartes : en page de gauche, la carte de la Polynésie française, en page de droite, celle des Îles Du Vent. Pour les cartes illustrant la Polynésie, la discrétisation des données (ou détermination des seuils séparant chacune des classes de valeurs propres à un indicateur) est réalisée sur l'ensemble des valeurs de Polynésie française, pour celle des Îles Du Vent, sont seules prises en compte les valeurs des Îles Du Vent. Ceci peut expliquer les différences d'appartenance à une classe pour un même quartier entre les deux cartes. Avec le même souci de précision, seules les zones habitées sont cartographiées pour la carte des Îles Du Vent. Sur chaque carte, la moyenne de la zone géographique (Polynésie française ou Îles Du Vent) est indiquée comme valeur de référence (en bas de page à gauche).

Légende des cartes

ÎLE : TAHITI

COMMUNE : HITIAA O TE RA

Commune associée : Tiarei

Les frontières des communes sont délimitées par un trait blanc, celles des communes associées par un trait pointillé blanc.

SOMMAIRE

Population

Densité de population	6
Jeunes de moins de 20 ans	8
Personnes de 60 ans et plus	10

Migration

Personnes nées hors de Polynésie française	12
Personnes non présentes sur la commune en 2007	14
Personnes non présentes sur le territoire en 2007	16
Personnes habitant le même logement en 2007	18

Éducation

Personnes sans aucun diplôme	20
Titulaires du baccalauréat ou plus	22
Diplômés de l'enseignement supérieur	24
Scolarisation des jeunes âgés de 15 à 18 ans	26
Scolaires et étudiants utilisant les transports collectifs	28

Actif ayant un emploi : personne qui déclare exercer une activité professionnelle la semaine précédant l'interview. Une personne qui aide un membre de sa famille dans son travail, un stagiaire rémunéré, une personne travaillant tout en poursuivant ses études font partie des actifs ayant un emploi. Une personne qui exerce une activité annexe marchande, se déclarant sans emploi, étudiant, femme au foyer, ou retraité n'est pas comptabilisée comme actif ayant un emploi.

Catégorie socioprofessionnelle : classe la population selon la profession exercée (ou de l'ancienne profession), la position hiérarchique et le statut (salarié ou non). La plus agrégée comprend 8 groupes socioprofessionnels : agriculteurs exploitants, artisans, commerçants et chefs d'entreprise, cadres et professions intellectuelles supérieures, professions intermédiaires, employés, ouvriers, retraités, autres personnes sans activité professionnelle.

Chômeur : personne qui s'est déclarée sans travail, immédiatement disponible pour occuper un emploi et à la recherche d'un travail. Si la personne réside dans un archipel éloigné (Australes, Marquises, Tuamotu-Gambier), l'obligation de recherche n'est pas demandée. Une personne inactive (retraité, étudiant...) s'étant déclarée disponible et à la recherche d'un emploi n'est pas comptabilisée comme chômeur.

Famille : partie d'un ménage comprenant au moins deux personnes ayant un lien de parenté direct (conjoint, enfant). Elle est constituée soit d'un couple homme/femme (marié ou non) avec ou sans enfant (directs ou assimilés), soit d'un adulte avec un ou plusieurs enfants. Dans une famille, l'enfant doit être célibataire (lui-même sans enfant et sans lien de couple au sein du ménage).

Famille monoparentale : comprend un parent isolé et un ou plusieurs enfants célibataires (n'ayant pas d'enfant au sein du ménage).

Inactif : personne qui n'est ni «actif ayant un emploi» ni «chômeur».

Les inactifs comprennent les retraités et retirés des affaires, les élèves, étudiants ou stagiaires non rémunérés (sauf ceux qui exercent simultanément une activité professionnelle) et les autres inactifs.

Une personne qui se déclare sans emploi, mais non disponible et ne recherchant pas un travail (sauf pour les archipels éloignés) est également enregistrée comme inactif.

Logement ordinaire : local utilisé pour l'habitation :

- séparé, c'est-à-dire complètement fermé par des murs et cloisons, sans

communication avec un autre local si ce n'est par les parties communes de l'immeuble (couloir, escalier, vestibule...);

- indépendant, à savoir ayant une entrée d'où l'on a directement accès sur l'extérieur ou les parties communes de l'immeuble, sans devoir traverser un autre local.

Ménage : au sens statistique, est défini comme l'ensemble des occupants d'une résidence principale, qu'ils aient ou non des liens de parenté. Un ménage peut ne comprendre qu'une seule personne. Remarque : ne font pas partie des ménages les sans-abri et la population des communautés (foyers de travailleurs, maisons de retraite, résidences universitaires, maisons de détention...).

Population active : comprend la population ayant un emploi et les chômeurs.

Résidence principale : logement ordinaire occupé de façon habituelle (soit plus de six mois dans l'année) et à titre principal par le ménage. Il y a ainsi égalité entre le nombre de résidences principales et le nombre de ménages.

Retraité : personne âgée de 53 ans ou plus sans emploi, n'étant pas au chômage et ayant eu autrefois une activité professionnelle. Par exemple, une femme au foyer âgée de 58 ans et déclarant avoir déjà travaillé est comptabilisée comme retraitée.

Taux d'activité : pourcentage de personnes actives dans la population âgée de 15 ans et plus.

Taux de chômage : pourcentage de chômeurs dans la population active.

Le taux de chômage au recensement diffère sensiblement du taux de chômage au sens du BIT. Un chômeur BIT est une personne en âge de travailler (15 ans ou plus) qui répond simultanément à trois conditions :

- être sans emploi, c'est-à-dire ne pas avoir travaillé, ne serait-ce qu'une heure, durant une semaine de référence ;

- être disponible pour prendre un emploi dans les 15 jours ;

- avoir cherché activement un emploi dans le mois précédent ou en avoir trouvé un qui commence dans moins de trois mois.

Le chômage issu du recensement est un chômage déclaré par la personne elle-même. En revanche, le chômage BIT est issu de l'enquête emploi qui mesure précisément si la personne est réellement disponible et recherche activement un emploi.
